

The National Black Church Initiative Final Report of the Michael J. Fox Foundation for Parkinson's Research and Next Steps

NATIONAL BLACK CHURCH INITIATIVE **AMERICAN CLINICAL HEALTH DISPARITIES COMMISSION** **Clinical Trials**

Parkinson's Disease and African-Americans

What is Parkinson's Disease?
Parkinson's disease (PD) is a progressive movement disorder of the nervous system. It causes nerve cells (neurons) in parts of the brain to weaken, become damaged, and die. This leads to symptoms like movement problems, tremor, stiffness, and impaired balance. As symptoms progress, people with PD may have difficulty walking, talking, or completing simple tasks.

BRAIN HEALTH AND BLACK PEOPLE

NATIONAL BLACK CHURCH INITIATIVE **Black Church Clinical Trials** **AMERICAN CLINICAL HEALTH DISPARITIES COMMISSION**

Neurological Impact
Recent research identifies that PD affects a brain network known as the somato-cognitive action network (SCAN), which links movement and thinking.

“Bringing people together to serve humanity”

The National Black Church Initiative’s Initial Report to The Michael J. Fox Foundation for Parkinson’s Research

We started our Parkinson’s Program with great enthusiasm, and we have made significant progress. The focus of this initiative is to introduce the Black Church to basic education and facts about Parkinson’s disease. To date, we have recruited 25 churches, created an informative newsletter, and constructed a social media campaign. We have printed and distributed over 65,000 copies of the attached newsletter. We are now planning an educational campaign for each of the five churches listed below.

We are surprised to note that this is the first serious attempt to educate the Black community on the deep ramifications of Parkinson’s disease. You will likely agree that this moment must not be lost.

The National Black Church Initiative (NBCI) is a coalition of 150,000 African American churches, comprising 27.7 million members, working to eradicate racial disparities in healthcare, technology, education, housing, and the environment. NBCI's mission is to provide critical wellness information to all of its members, congregants, churches, and the public. The National Black Church Initiative’s methodology utilizes faith and sound health science. We also offer our member congregants and the public helpful, science-based tips for developing and maintaining a healthy lifestyle.

The following is the list of accomplishments we have achieved over the past year, 2025. This has been a remarkable period of learning and growth. Here is a detailed snapshot of the year. In the “Next Steps” section of this report, we have provided the key elements of a roadmap on how to institutionalize the gains and maximize and build off of the strongest moments of the NBCI Parkinson’s Program.

In light of Rev. Jesse Jackson's recent death, we have sent the following documents to all 300 of our churches in St. Louis and Houston. We wanted to start building on our efforts and honoring him in death by highlighting the need for Parkinson's disease (PD) prevention and education.

Parkinson's Press releases

- **[The National Black Church Initiative is Joining with The Michael J Fox Foundation to Raise Awareness of Parkinson's Disease](#)**

We are both honored and proud of The Michael J. Fox Foundation for their brilliant research and advocacy concerning Parkinson's disease

NBCI Development of Parkinson's Materials

It became apparent to us that we had to work hard to develop the language, messaging, and material to push this program. So we quickly organized a focus group to evaluate the material necessary for this campaign.

NBCI developed a comprehensive website as a primer for members unfamiliar with PD. The opening webpage turned out to be a hit. Our internal data tells us that the page has been visited over 250,000 times, with the average visitor staying more than 5 minutes. This is a 16 percent increase over the normal number of visitors to our website in general.

Here is the website: naltblackchurch.com/health/parkinsons.html

Statistical Survey and Analysis

Statistical Survey and Analysis

In a broad comparative analysis of the four congregations, we see some startling but also familiar answers revealed in the surveys. The total number of surveys across the four congregations is 769.

Here are some key takeaways

1. The vast majority has either never heard of Parkinson's disease or knows very little about it.
2. No one has self-identified as having Parkinson's disease. NBCI believes that this was a missed opportunity. The question should have read, "Do you or any of your family members, or anyone you know of, have Parkinson's disease?" ([*Please see section 3 of this report.*](#))
3. On the question of prevalence, African Americans, as a cultural defense, will never say a particular disease runs in their race even though the data says otherwise.
4. Over 90% of the people in the four congregations are hungry for more information on Parkinson's disease.

The National Black Church Initiative Parkinson's Survey

The goal was to see how many people have PD in 4 congregations in St. Louis and Houston. These are our results: 6 in St. Louis and 15 in Houston.

St. Louis
Bethlehem Missionary Baptist Church
127 parishioners surveyed

NBCI Survey to Congregants

How would you describe your knowledge of Parkinson's disease?

- | | |
|--|----|
| 1. I have never heard of it. | 90 |
| 2. I have heard of it, but don't know much about it. | 22 |
| 3. I know a little about it. | 7 |
| 4. I am quite familiar with it. | 2 |
| 5. I have extensive knowledge about it. | 6 |

Has a healthcare professional ever told you that you have Parkinson's disease?

- Yes, when:
 No
 I'm not sure

How would you think the rate of Parkinson's disease in African Americans compares to other racial groups?

- | | |
|---|----|
| 1. Less prevalent (common) than other racial groups | 86 |
| 2. About the same as other racial groups | 22 |
| 3. More prevalent than other racial groups | 5 |
| 4. Not sure how it compares | 14 |

Would you like to receive information about Parkinson's disease from the Michael J. Fox Foundation?

The National Black Church Initiative, a Coalition of 150,000 Black Churches, is Joining with The Michael J. Fox Foundation in Raising Awareness of Parkinson's Disease and Research

This is part of the NBCI National Black Health Agenda

The National Black Church Initiative (NBCI), a coalition of 150,000 African American churches and 27.7 million members, is launching a new program supported by [The Michael J. Fox Foundation for Parkinson's Research \(MJFF\) - www.michaeljfox.org/](http://www.michaeljfox.org/) to raise awareness of Parkinson's disease and research opportunities in the African American community. The pilot program, launching in Houston, Texas and St. Louis, Missouri, will engage NBCI members in educational programming and connect congregants to Parkinson's care and research resources.

MJFF, the largest nonprofit funder of Parkinson's research, runs many programs to broaden our understanding of the disease. Notably, the Foundation supports the [Global Parkinson's Genetics Program - https://gp2.org/](https://gp2.org/), a resource of the [Aligning Science Across Parkinson's initiative - parkinsonsroadmap.org/](http://parkinsonsroadmap.org/). This program collects data and samples from more than 220 studies in over 60 locations on six continents to uncover more about genetic drivers of Parkinson's disease. [The Black and African American Connections to Parkinson's Disease - www.blaacpd.org/DJYD/](http://www.blaacpd.org/DJYD/) study is one contributing study. It is recruiting at 11 U.S. sites, including in Houston and St. Louis.

"The Michael J. Fox Foundation is committed to driving cures for all people with Parkinson's disease," says Alyssa O'Grady, MJFF Head of Clinical Research. "We are grateful for this partnership with the National Black Church Initiative to educate, engage and empower the African American Parkinson's community toward better care and research participation. Momentum is building toward new treatments; only with partners from all backgrounds will we fully realize a future without this disease."

African Americans and Parkinson's Disease

Currently, about one million people in the US have Parkinson's disease (PD). The prevalence of PD in the Black and African American community is not exactly known. This is partly due to limited inclusion of Black and African American people in research studies. Approximately 6% of all PD clinical trial participants are "non-White".

African Americans are about half as likely to be diagnosed with PD as their White counterparts. When diagnosed, they are often at a later stage in their disease than their White counterparts. Appropriate and representative participation in research will improve understanding of how PD impacts the Black and African American community.

What is Parkinson's Disease

Parkinson's disease (PD) is a progressive movement disorder of the nervous system. It causes nerve cells (neurons) in parts of the brain to weaken, become damaged, and die. This leads to symptoms like movement problems, tremor, stiffness, and impaired balance. As symptoms progress, people with PD may have difficulty walking, talking, or completing simple tasks.

Who is at risk for Parkinson's Disease

Although the cause of most Parkinson's disease cases is unknown, researchers believe it is caused by multiple factors. Some of these risk factors include:

- **Aging.** The greatest risk factor for PD is aging, and researchers expect the number of people with PD to double by 2040 due to an aging population.
- **Environment.** Factors like head injury, pesticide exposure or stressors of military service (like traumatic brain injury or exposure burn pits) are associated with an increased risk of developing PD
- **Genetics.** Researchers estimate about 30% of PD risk is explained by genetics. Several genes increase the risk of Parkinson's disease (PD) but don't guarantee the disease.
 - In 2023, [researchers found a GBA gene variant - tinyurl.com/yj78bdy3](https://www.tinyurl.com/yj78bdy3) that raises PD risk in people of African ancestry.

The Michael J. Fox Foundation and Aligning Science Across Parkinson's (ASAP) is working on the Global Parkinson's Genetics Program (GP2) and its study, [Black and African American Connections to Parkinson's Disease - www.blaacpd.org/DJYD/](https://www.blaacpd.org/DJYD/) (BLAAC PD).

BLAAC PD is currently enrolling Black and African American individuals with or without PD nationwide.

Visit www.blaacpd.org to learn more and join!

Symptoms of Parkinson's disease (PD)

Symptoms of PD look different in different people. If you think you might have symptoms of PD, it's important to visit a neurologist or movement disorder specialist.

Some symptoms of PD are **motor symptoms**, like:

- **Stiffness**, or rigidity – where someone may experience muscle stiffness
- **Slowness**, or bradykinesia – where someone may experience decreased spontaneous and voluntary movement. This could look like slower walking, less arm swinging while walking, or decreased blinking or facial expressions
- **Resting tremor** – where someone may experience a rhythmic, involuntary shaking that occurs in a finger, hand or limb when relaxed and disappears during voluntary movement.

Other symptoms are non-motor symptoms, sometimes called the “invisible” symptoms of PD:

- **Non-movement symptoms**
 - Constipation
 - Low blood pressure
 - Sexual, sweating, and urine problems
- **Mood and thinking changes**
 - Apathy (lack of interest)
 - Cognitive (memory or thinking) problems
 - Mood disturbances

Disparities in Parkinson's Disease

- African Americans with neurological diagnoses are less likely to see neurologists. Newly diagnosed African Americans with PD are less likely to receive physical therapy or medications at their first appointment.
- African Americans with Parkinson's Disease have higher rates of dementia diagnosis and lower rates of survival
- African Americans are less likely to receive deep brain stimulation

PD in The News

Parkinson's research advocate Richard Huckabee, age 65, shared his story with the leading scientific outlet [STAT - tinyurl.com/46w-bx9mb](https://www.stat.com/46w-bx9mb) about the challenges he faced in his nearly decade-long journey to receive a diagnosis and access care. As a Black man, Richard experienced ongoing disparities when, alongside his wife Angela, they sought answers from multiple physicians: “We don't fit the profile. Some of the doctors said I'm taking it too serious. Some of them said, ‘There's nothing wrong with you.’” [Read the full article here - tinyurl.com/46w-bx9mb](https://www.tinyurl.com/46w-bx9mb).

Demographic Impact of the NBCI Parkinson's Program (St. Louis, Houston)

Demographics of Parkinson's Disease in the African American Communities in Houston and St. Louis

Parkinson's disease affects approximately 1 million Americans, with prevalence increasing significantly after age 60. While historically reported prevalence has been lower in African Americans compared to White Americans, emerging research indicates this discrepancy is likely driven by:

- Underdiagnosis
- Delayed referral to neurologists
- Reduced access to movement disorder specialists
- Lower participation in clinical trials

African Americans are more likely to present with advanced-stage disease at diagnosis, resulting in greater functional impairment and reduced treatment options.

Although Parkinson's disease has historically been reported at lower rates in African Americans, emerging data suggests underdiagnosis and delayed specialty referral contribute to masked disease burden. In metropolitan areas such as Houston and St. Louis — with African American populations exceeding 950,000 and 1.3 million respectively — even conservative prevalence estimates suggest more than 1,000 African American residents per region are living with Parkinson's disease. Targeted community engagement and early detection initiatives are urgently needed to reduce disability and improve access to neurological care.

Houston, Texas

Metro population: ~7 million

African American population: ~1.3 million (~18–20%)

Houston is home to the Texas Medical Center, the largest medical complex in the world, yet racial disparities in neurological access persist.

NBCI Positive Parkinson's Program Impact

Using national age-adjusted prevalence (approx. 1% of adults over age 60):

If 10–12% of Houston's African American population is over 60:

- **Estimated African American seniors:** ~130,000–155,000
 - **Projected Parkinson's cases:** 1,300–1,800+ individuals
- These figures likely underestimate true prevalence due to diagnostic disparities.

St. Louis, Missouri

Metro population: ~2.8 million

African American population: ~950,000 (~30–35%)

St. Louis hosts major neurological research centers including Washington University School of Medicine in St. Louis.

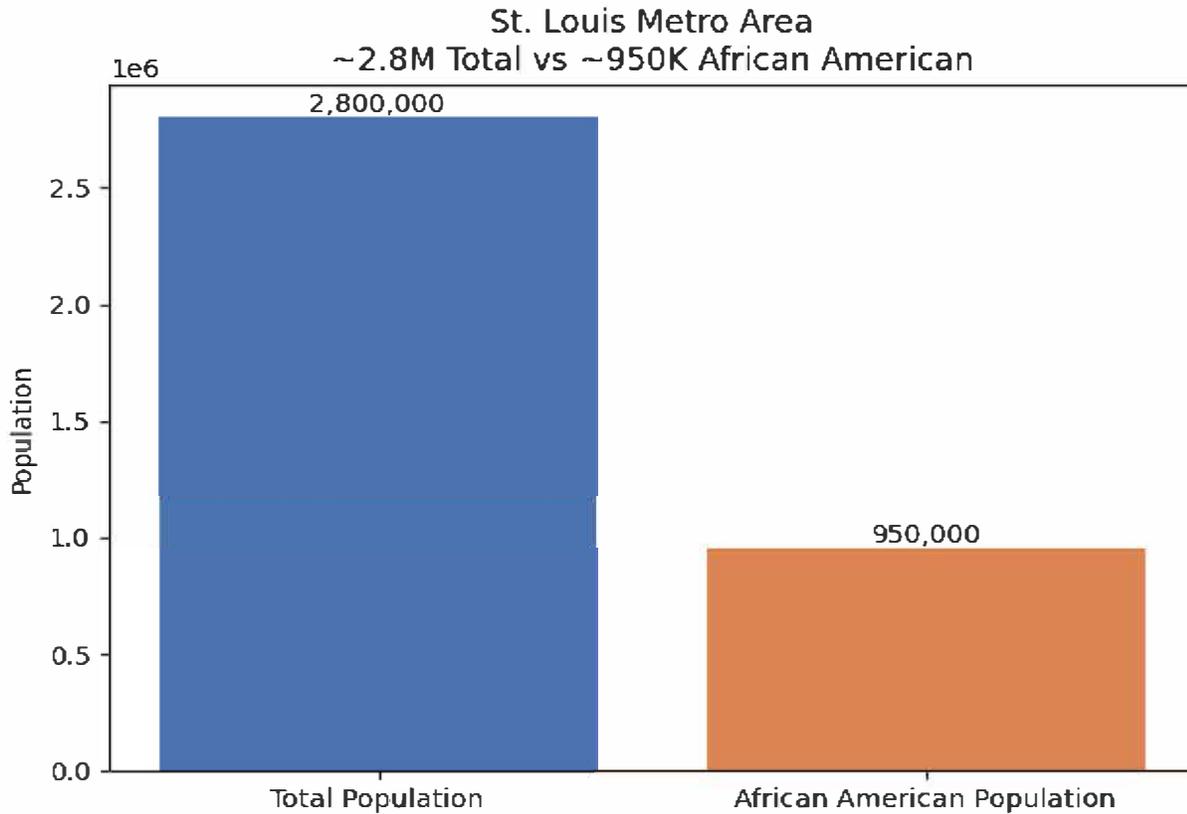

NBCI Positive Parkinson's Program Impact

Assuming 12–15% of African American residents are over 60:

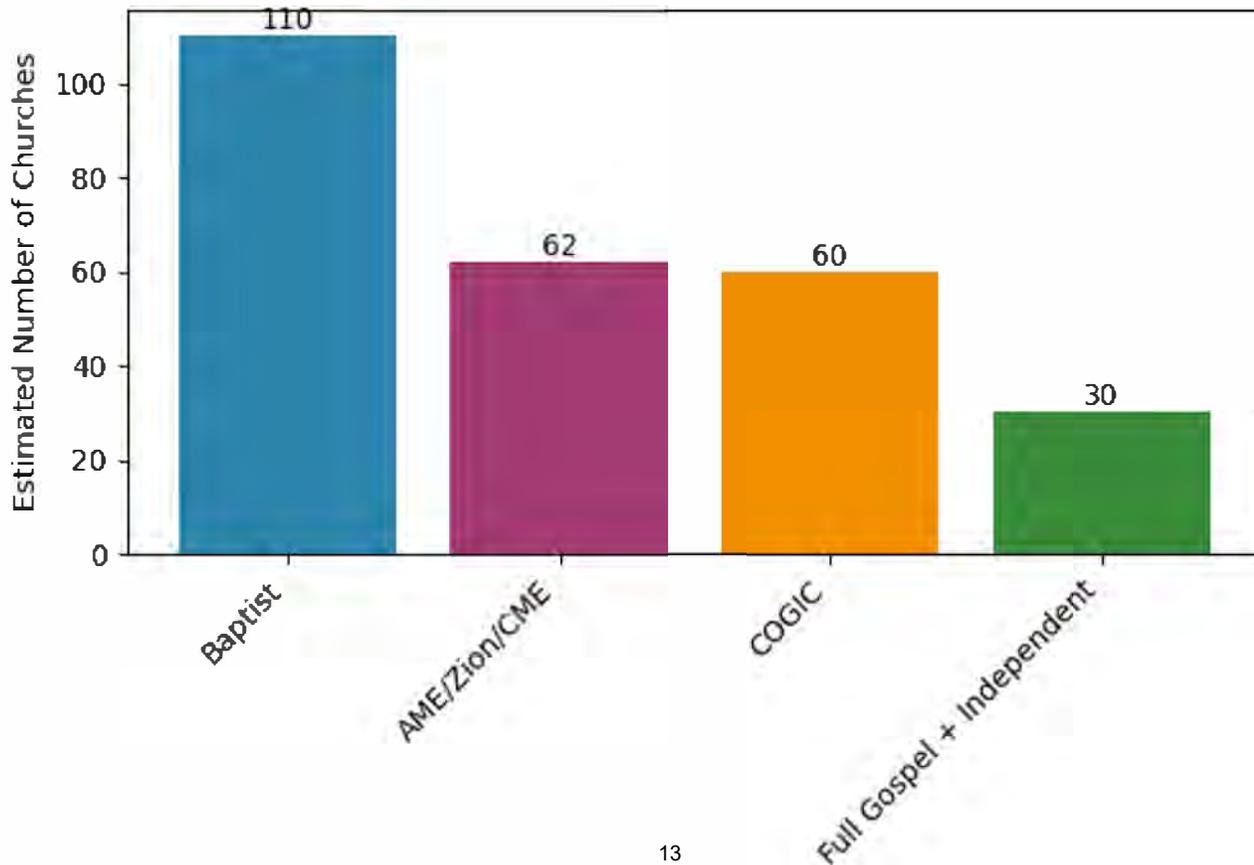

- **Estimated African American seniors:** ~114,000–142,000
- **Projected Parkinson's cases:** 1,100–2,200+ individuals

St. Louis' higher proportion of African American residents suggests a substantial community-level disease burden.

2025 Parkinson's and Brain Health Social Media Campaign and Data

We launched a very successful Parkinson’s social media campaign, featuring images, videos, and shorts posted across the platform. We utilized Facebook, Twitter, YouTube, Instagram, and TikTok. The data proved we have a strong following. We would like to coordinate this with the Michael J. Fox Foundation to strengthen our messaging.

X (Twitter): Strong engagement overall (most posts: ~150–185 impressions). This usually signals distribution issues (timing, follower base, or creative not stopping scroll), not a lack of message clarity.

Instagram Reels: Mostly high engagement, but you have at least one clear outlier (~10 engagements, 100% engagement rate shown) which is a good “proof of concept” that the topic/format can hit when packaged right.

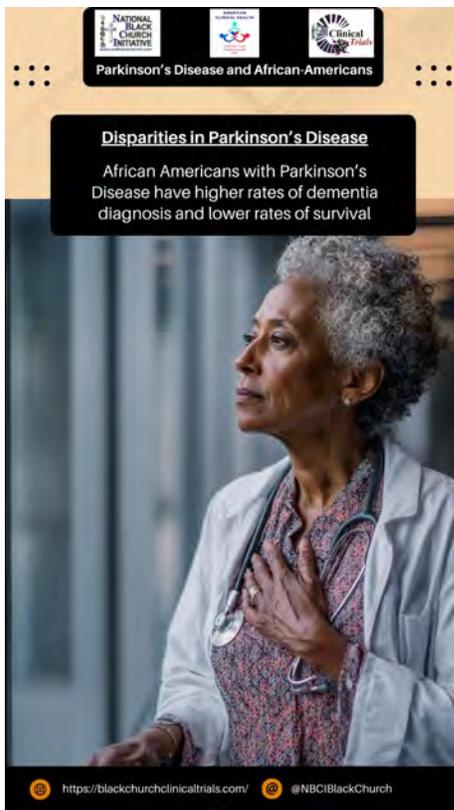

TikTok: Reach/view volume is meaningfully higher than other platforms (the majority of posts show ~3466 reach / 2745 views; others include much larger view counts)—this is a strong channel for a wider push.

YouTube: Solid baseline visibility (top video ~390 views / 74 engaged views), indicating the content is being consumed when discovered.

The NBCI Parkinson campaign is ready for a wider push because the messaging is clear, consistent, and already packaged into platform-native formats across X, Instagram, TikTok, Facebook, and YouTube.

The content includes strong awareness points, research/disparity education, and a repeatable donation call-to-action, which makes it easy to scale without rebuilding assets. Early performance signals—especially higher video reach on TikTok and steady YouTube views—show the campaign has enough traction to justify expanding distribution and promotion.

A robust social media data and analysis is in the appendix of this report.

The Rev. Jesse Jackson Factor

In light of the death of Rev. Jesse L. Jackson, who succumbed to the condition of Parkinson's disease, and because of his moral and social standing in the Black Church, the ministers in St. Louis, Houston, and around the country want NBCI to continue its work in raising the awareness of PD among our 150,000 Black Churches and 27.7 million members.

Rev. Jackson is truly beloved among our church members. We can build on this.

This moment gives The Michael J. Fox Foundation for Parkinson's Research and the National Black Church Initiative a rare opportunity to launch a national movement to raise awareness among the nation's 42 million African Americans about the scientific progress being made to cure this dreadful disease. The ministers are already committed to putting together two citywide programs in both Houston and St. Louis in honor of Rev. Jackson **in the next six months, as indicated in the email dated Feb. 22, 2026.**

- [National Black Church Initiative Honors and Salutes the Life of our Beloved Brother in Christ The Rev. Jesse Jackson](#)

The National Black Church Initiative (NBCI), a coalition of 150,000 African American and Latino faith communities comprising 27.7 million members, express its sadness and love for the life and work of the Rev. Jesse Jackson.

Next Steps: Working toward a Two-Year Agreement

We would like to work toward a new, two-year agreement. Here is a list of possible deliverables that the agreement can be built around.

Employ and activate all NBCI clinical structures in our clinical trial methodology and online tools to recruit for Parkinson's clinical trials.

- <https://naltblackchurch.com/>
- <https://blackchurchclinicaltrials.com/>
- <https://enrollnowmagazine.org/>
- <https://achdc.net>

Increase the NBCI church pool from 25 to 100 churches in both St. Louis and Houston and add a list of targeted churches. In addition to any other city.

Enhance the NBCI Parkinson Newspaper to 4 pages, including clinical research and other key scientific facts and information.

Drill down into the demographic analysis of PD in the African American communities of Houston and St. Louis.

Continuing our work on finding those with PD in our 300 churches. To date, in NBCI congregations: 15 in Houston and 6 in St. Louis.

Document, through a video series on Parkinson's, the Black Parkinson's patients and their unique challenges and struggles with the disease (current project).

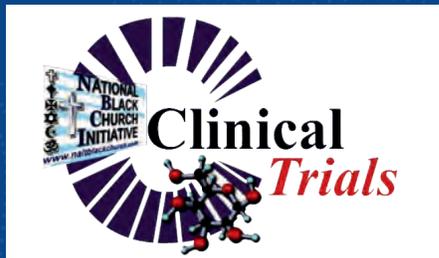

Create a "Parkinson's Resource Handbook" for African American patients.

Hold seven (7) town hall events on PD, 3 in St. Louis and 3 in Houston:

- "What is Parkinson's Disease?"
- "Symptoms and Treatment of Parkinson's Disease"
- "Brain Health and Mental Health/Coping with Parkinson's"
- "Faith and Parkinson's Disease"
- "It's a Family Affair: Parkinson's Disease and Helping Patients (Strategies toward Success)"
- "Clinical Trials and Parkinson's Disease: Why Are They Needed in the African American Community?"
- "Education, Recruitment, and Retention of Patients for Clinical Trials for Parkinson's Disease."

APPENDIX

The Nat'l Black Church Initiative is Joining with The Michael J Fox Foundation to Raise Awareness of Parkinson's Disease

WASHINGTON, DC, UNITED STATES, January 10, 2025 /EINPresswire.com/ -- The National Black Church Initiative (NBCI), a coalition of 150,000 African American churches and 27.7 million members, is launching a new program supported by [The Michael J. Fox Foundation for Parkinson's Research \(MJFF\)](#)² to raise awareness of Parkinson's disease and research opportunities in the African American community. The pilot program, launching in Houston, Texas and St. Louis, Missouri, will engage NBCI members in educational programming and connect congregants to Parkinson's care and research resources.

Parkinson's is a progressive, neurodegenerative disorder — a condition that damages the brain and worsens over time — affecting about 1 million people in the United States. The hallmark tremor (shaking), slowness and stiffness of Parkinson's disease happens when cells in the brain that produce dopamine stop working or die.

Dopamine is a neurotransmitter, a chemical that sends messages between cells to help the body function. Other body systems impacted by Parkinson's can cause sleep disturbances, mood changes, memory and thinking issues, balance and walking problems, and other symptoms.

“
We are both honored and proud of The Michael J. Fox Foundation for their brilliant research and advocacy concerning Parkinson's disease.”
— Rev. Anthony Evans, President of the National Black Church Initiative

Our understanding of the cause, progression and treatment of Parkinson's disease is growing but remains far from complete. Unfortunately, most of this research has not been inclusive of the broader community of people with Parkinson's, including people and families of the African American community. As a result, research has shown an incomplete picture of how PD affects patients and families

across racial, ethnic, socioeconomic, gender, sexuality and geographic spectrums. It is estimated that African Americans are disproportionately impacted in receiving care and often a diagnosis at a later stage of the disease, which may impact treatment and surgical intervention plans. Many factors such as limited access to healthcare, historical exclusion from research studies, and practitioner bias drive these disparities.

Rev. Anthony Evans, President of the National Black Church Initiative, said, “We are both honored and proud of The Michael J. Fox Foundation for their brilliant research and advocacy concerning Parkinson's disease. NBCI's effort is governed by our commitment to increase education and clinical research awareness and opportunities for both African American clinicians and patients. Our vision is to work in partnership with the Foundation to create a level-one educational and clinical delivery system to educate and empower our members toward a cure for this dreadful disease. This partnership underscores our commitment to fulfilling the principles of the NBCI National Black Health Agenda.”

MJFF, the largest nonprofit funder of Parkinson's research, runs many programs to broaden our understanding of the disease. Notably, the Foundation supports the Global Parkinson's Genetics Program, a resource of the [Aligning Science Across Parkinson's](#)¹ initiative. This program collects data and samples from more than 220 studies in over 60 locations on six continents to uncover more about genetic drivers of Parkinson's disease. The [Black and African American Connections to Parkinson's Disease](#)³ study is one contributing study. It is recruiting at 11 U.S. sites, including in Houston and St. Louis.

“The Michael J. Fox Foundation is committed to driving cures for all people with Parkinson's disease,” says Alyssa O'Grady, MJFF Head of Clinical Research. “We are grateful for this partnership with the National Black Church Initiative to educate, engage and empower the African American Parkinson's community toward better care and research participation. Momentum is building toward new treatments; only with partners from all backgrounds will we fully realize a future without this disease.”

About NBCI

The National Black Church Initiative (NBCI) is a coalition of 150,000 African American and Latino churches working to eradicate racial disparities in healthcare, technology, education, housing, and the environment. The mission of NBCI is to provide critical wellness information to all of its members, congregants, churches, and the public. NBCI, utilizing faith and sound health science and partners with major organizations and officials, reduces racial disparities in the variety of areas cited above. NBCI's programs are governed by credible statistical analysis, science-based strategies and techniques, and methods that work and offer faith-based, out-of-the-box, and cutting-edge solutions to stubborn economic and social issues.

National Black Church Initiative Honors and Salutes the Life of our Beloved Brother in Christ The Rev. Jesse Jackson

WASHINGTON, DC, UNITED STATES, February 17, 2026 /EINPresswire.com/ -- The [National Black Church Initiative](#) (NBCI), a coalition of 150,000 African American and Latino faith communities comprising 27.7 million members, express its sadness and love for the life and work of the Rev. Jesse Jackson. Jesse Jackson was one of the Black Church's great leaders. He preached the Gospel and took it to the streets. Rev. Jackson was what Martin Luther King, Jr. called a drum major for justice and peace. Jesse was also an example of how this country's racism robs it of the great leaders of our time. Jesse should have been the first African American President of the United States, not President Obama. Jesse is the single reason why President Obama was elected. Obama failed to deliver. This would not have been true for Rev. Jackson. He would not have wasted eight years. Jesse would have moved this country forward. The Rev. Anthony Evans, president of the National Black Church Initiative, said that Rev. Jackson's life is a part of a continuum of great Baptist preachers who used their gifts to move humanity forward. He kept the faith and the light of Christ and NBCI will continue that work every day."

NBCI President Anthony Evans and the Rev. Jesse Jackson

Recently, NBCI honored the Rev. Jesse Jackson for years of distinguished service to the gospel ministry as it unveiled the [25 Most Effective Christian Preachers in the Country](#). Rev. Jackson was a student of timing. He knew when to move. His language was direct and shaped to move the argument. He. We are better off that Jesse has come this way. The Black church will miss him. He was handsome for Christ to help turn the Gospel into the living word of GOD.

We are better off that Jesse has come this way, Praise be to God in Christ for his life and work. The National Black Church Initiative is carrying on that work

ABOUT NBCI

The National Black Church Initiative (NBCI) is a coalition of 150,000 African American and Latino

churches, comprising 27.7 million members, working to eradicate racial disparities in healthcare, technology, education, housing, and the environment. NBCI's mission is to provide critical wellness information to all of its members, congregants, churches, and the public. The National Black Church Initiative's methodology utilizes faith and sound health science. We also offer our member congregants and the public helpful, science-based tips on developing and maintaining a healthy lifestyle.

The National Black Church Initiative's purpose is to partner with major organizations and officials whose primary mission is to reduce racial disparities in various areas, as cited above. NBCI provides faith-based, innovative, and

cutting-edge solutions to complex economic and social challenges. Credible statistical analysis, science-based strategies and techniques, and effective methods govern NBCI's programs.

This event will explore how Parkinson's Disease (PD) uniquely impacts the Black community and outline actionable steps toward greater awareness, early detection, and care access.

Featured Speakers:

Rev. Anthony Evans â€“ President, National Black Church Initiative

Bishop L. M. Wooten â€“ Host Pastor, Williams Temple Church in God in Christ

A Parkinson's Disease expert will also be present to provide medical insights and answer your questions.

Join us as we unite faith and health to empower our community with the knowledge and tools to act.

We look forward to your participation in this vital
